PALLET BUILDER

NO-CODE PALLETIZING PLATFORM

KEY BENEFITS

Expands Smart Pendant capability for palletizing tasks

Fast development and deployment for palletizing jobs

Free, convenient download to Smart Pendant

REQUIREMENTS

Smart Pendant V3.0 or newer

COMPATIBILITY

YRC1000 controller

YRC1000micro controller

- Easy-to-use Pallet Builder™ extension app enables quick generation of pallet patterns.

- Provides an intuitive user interface with guided prompts for cell configuration, pallet pattern setup and programming.

- Offers support for general functions including cell definition, gripper definition, and single pick and place.

- Supports multiple infeeds, build stations and slip sheet dispenser stations, with a maximum of eight combined stations.

- Robust product database allows large quantity and variety of cases to be used in various jobs and patterns.

- Ideal for single pick tasks where a single product in the same orientation arrives on an infeed and for single drop positions with selectable label orientation.

- Supports multiple definable approach and depart points for both pick and place operations, and ability to call jobs during palletizing cycle.

- Automatic or Custom Patterns with contextual help files available for every screen.

- Compatible with wide variety of grippers and end-of-arm tooling.

- Jobs are easily editable or customizable to accommodate specific system requirements.

- Available for use with HC-series and GP-series robots.

- Free download at: www.motoman.com/palletbuilder
