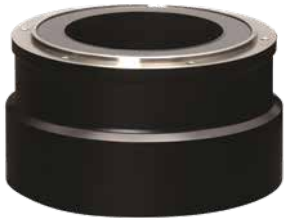
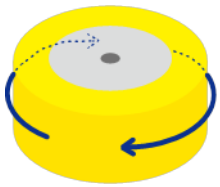
Product Overview

SGM7D



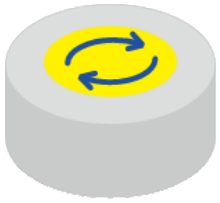


Outer Rotor with Core

Ideal for applications that require high torque, high precision and high rigidity.

- High inertia
- Built-in high-resolution (24-bit) encoder
- A high allowable load moment of inertia ratio enables application to large loads
- Large center aperture provides more space for wiring connections

SGM7F

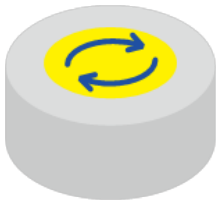


Inner Rotor with Core

Ideal for applications that require downsizing and a shorter takt time.

- Medium inertia
- Built-in high-resolution (24-bit) encoder
- Compact size with small rotor diameter
- Greater speed and torque stability enable high-speed, high-frequency positioning

SGM7E



Coreless, Inner Rotor

Ideal for applications that require smooth movement withput speed fluctuations.

- Low inertia
- Built-in high-resolution (24-bit) encoder
- Smooth operation without speed fluctuations achieved through coreless structure with low cogging

Range Overview

	SGM7D	SGM7F	SGM7E
Outer diameter of motor (mm)	107 – 264	100 – 360	135 – 290
Rated torque (Nm)	1.3 – 240	2 – 200	2 – 35
Maximum torque (Nm)	5 – 400	6 – 600	6 – 105
Maximum speed (min^{-1})	48 – 360	250 – 600	250 – 500
Supply Voltage	200 V		
Encoder	24 bit (multiturn and incremental)		

Open for challenging Applications

YASKAWA provides equipment for a broad range of applications and offers support in all engineering tasks. This way YASKAWA will find the perfect solution for common tasks and complex automation challenges.

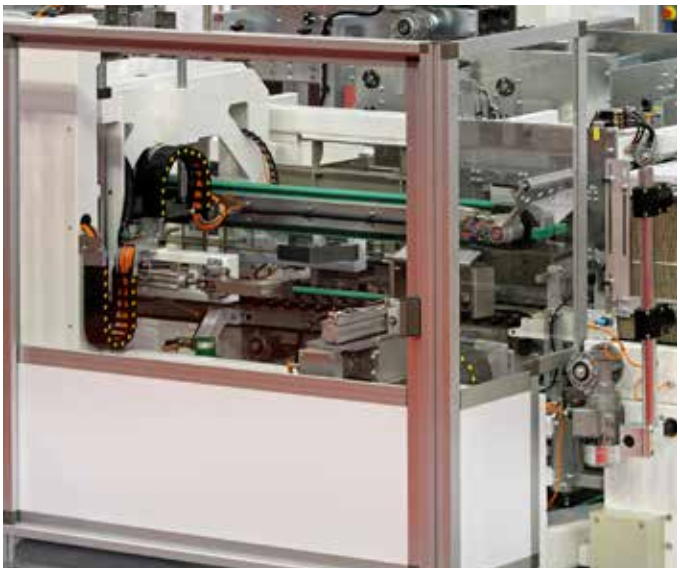
- Quick and easy set-up and no configuration effort - these are the benefits of the YASKAWA out-of-the-box solutions.
- In case you want to upgrade a solution, the whole Sigma-7 system can easily be used for any new task.

Complete Solutions

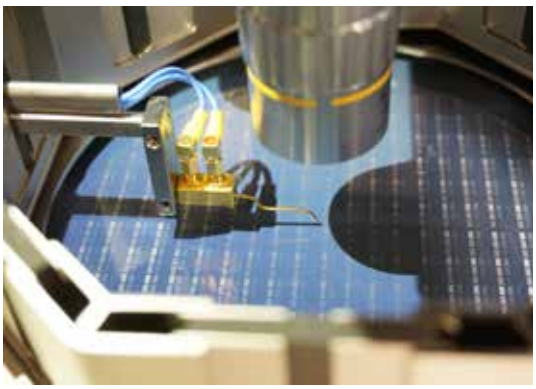
YASKAWA offers comprehensive customized automation solutions with powerful hardware, including controller, visualization, drive concept and industrial robots.

Our motion control products are developed to control all functions in machine process control including motion control, PLC functionality, I/O, sequential logic and process algorithms. Controller integration lowers system cost, increases performance, reduces required panel space and unifies programming.

Process monitoring and diagnostics are inherent features of our platform. These advancements increase product throughput and reduce machine downtime. With our systems in the field, productivity increases by more than 200 % have been achieved. Smoother running and e-stop recovery routines lessen mechanical wear and reduce down time.



For a wide Range of Applications



- Machine tools
- Printing rolls
- Indexers
- Sorters and bonders

- Rotary tables
- Semiconductor manufacturing
- Direct torque transmission
- And many other applications

Sigma-7 Direct Drive Motors Highlights

High precision and performance

Built-in high-resolution 24 bit encoder

With 16.77 million pulses per revolution, we provide the industry-top level of positioning precision.

Improved machine performance

The motion mechanisms stiffness is greatly improved. YASKAWA direct drive motors allow high radial and axial forces.The motors are also available in a high mechanical precision version.

High efficiency and energy saving

Short acceleration and settling time

In combination with the Sigma-7 drive and the performance of the linear motor, the after motion settling time will be shortened significantly.

No gear losses

There is no reduction like a gear or a belt in efficiency due to a power transmitting mechanism, which helps save energy for the machine. A high amount of poles guarantees a smooth running characteristic of the motor. No gear losses.

High reliability and compact design

Ease of operation and high reliability

YASKAWA products stand for high reliability by best performance. YASKAWA Direct Drive Motors are easily handled by the use of the intergrated auto tuning functions.

Direct coupling design and construction

A direct drive servomotor is an actuator that directly transmits the rotational force of the motor so that couplings and other support mechanisms are not required, which saves installation space.
